promoting agent for SIV and also for certain strains of HIV-2 and M-tropic HIV-1. Bonzo and the closely related BOB (brocher of Bonzo) are related to the chemokine receptor family and are expressed in lymphoid tissues. Use of these new receptors following experimental infection of non-human primates with SIV strains may provide important insight into viral transmission and mechanisms of SIV- and HIV-induced AIDS. The invention provides Bonzo and BOB amino acid and DNA sequences, mammalian cells transfected with Bonzo and/or BOB and human CD4, and antibodies to Bonzo. A method of identifying other translocation promoting agents is also disclosed. Cells (or transgenic animals) that express Bonzo or BOB and contain a second of the sequence of and CD4 are used to: (a) identify therapeutic agents for treating AIDS (acquired immune deficiency syndrome), by increasing the resistance of cells to infection; (b) in filters to remove viruses with HIV envelope glycoproteins from biological fluids; (c) to identify ligands for Bonzo or BOB; (d) to identify compounds that increase the immune response to a specific pathogen or vaccine by increasing Bonzo/STRIA3 expression; and contains the seconds of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0

This cDNA clone codes for African green monkey Bonzo (see AAM97784), a novel HIV/SIV translocation promoting agent that acts in conjunction with CD4 to serve as a receptor for the entry into a cell of a vitus having a specific viral envelope glycoprotein. Bonzo is a member of the 7-transmembrane G-protein coupled receptor family, is closely related to the chemokine receptor family, and is expressed in lymphoid tissues. The invention provides the amino acid sequences (see AAM97783-89) and DNA sequences (see AAX07289-94) of human, African green monkey and pig-tailed macaque Bonzo and Bob (brother of Bonzo) transfocation promoting agents. These novel receptors were identified using an expression cloning stategy. They were found to be used by particular strains of HIV-2 and M-1 tropic HIV-1. The invention also includes: mammalian cells transfected with Bonzo and/or Bob and human CD4, which can be used to screen contential therapeutic agents and identify ligands; antibodies to Bonzo, which can be used therapeutically, e.g. as antagonists or to target
                                                                                                                                       1017

The invention relates to selecting an agent that may be used in treating acquired immunodeficiency syndrome (AIDS) comprises administering a potential therapeutic agent to a cell expressing human CD4 and primate Bonzo or BOB (Brother Of Bonzo), contacting the cell with a virus pseudotyped with an HIV envelope glycoprotein, and measuring the cell's ability to resist infection. The method is useful for selecting or identifying an agent, which can be used in treating AIDS

Bonzo, G-protein coupled receptor; receptor; STRL33; TYMSTR; retrovirus; translation promoting agent; anti-HIV; antiviral; virucide; AIDS;
                                                                                                                                                African green monkey G-protein coupled receptor Bonzo cDNA
```

```
The present sequence is the coding sequence for African green monkey
Bonzo (also named STR13 or TYMSTR). Human Bonzo (see ABB79743) has been
identified as a novel G-protein coupled receptor involved in retroviral
entry into cells, acting in conjunction with CD4 as a translocation
promoting agent for SIV and also for certain strains of HIV-2 and M-
cropic HIV-1. Bonzo and the closely related BOB (brother of Bonzo) are
related to the chemokine receptor family and experimental infection of
tissues. Use of these new receptors following experimental infection of
con-human primates with SIV strains may provide important insight into
viral transmission and mechanisms of SIV- and HIV-induced AIDS. The
invention provides Bonzo and BOB amino acid and DNA sequences, mammalian
cells transfected with Bonzo and/or BOB and human CD4, and antibodies to
long disclosed. Cells (or transgenic animals) that express Bonzo or BOB
and CD4 are used to: (a) identify therapeutic agents for treating AIDS
captized immune deficiency syndrome). Dy increasing the resistance of
cells to infection; (b) in filters to remove viruses with HIV envelope
glycoproteins from biological fluids; (c) to identify ligands for Bonzo
or BOB; (d) to identify compounds that increase the immune response to a
specific pathogen or vaccine by increase the immune response to a
specific pathogen or vaccine by increasing Bonzo/STRL33 expression; and
(e) to identify antihilalmamatory agents that reduce Bonzo/STRL33
expression; and
thus inhibit recruitment of memory cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        197 GGTCTTTTTGCCCTGTGTACCTGGTAGTGTTTGTCTTTGGACTGCTAGGAAACTCCCT 256

                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GFCRs), mutant (non-endogenous) versions of the GFCRs, and the polynucleotide sequences encoding them. The GFCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, anaesthesia, myocardial infarction (MI), arricky, prostatic hypertrophy, rhinitis, and angina. The present sequence encodes an endogenous human GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  225

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ATACCATAACCAGCTTTAAGTATGCCATCGTAGTGACAGAGGCTATAGCATACTTTCGGG 945
                                                                                                                                       The present sequence encodes a human Bonzo polypeptide. Bonzo is a CXC chemokine receptor. The specification describes a method for identifying agents (especially antibodies) which bind to Bonzo and inhibit the binding of a ligand (especially SEXCKine (spleen extracted chemokine)) and the agents per se. The agents identified may be used for the trearment of a disorder/disease related to aberrant Bonzo expression and activity, such as inflammatory disease, cancers and/or infections (e.g.

The invention relates to a method for identifying a compound capable of treating a cardiovascular disorder. The present invantion identifies the differential expression of 1882, 6193, 6193, 7711, 1495, 2002, 33216, 3726, 69292, 21656, 32427, 2402, 7747, 1720, 9151, 60491, 1371, 7077, 33207, 1419, 18036, 16105, 38650, 14245, 58848, 1870, 25856, 32394, 3484, 2858, 283, 2554, 9464, 17799, 2668, 43848, 3215, 12208, 2914, 51130, 1688, 283, 2554, 9464, 17799, 2668, 43848, 3215, 12208, 2914, 51130, 16989, 21833, 2917, 59590, 15992, 2094, 2252, 3474, 9792, 15400, 1452 or disgnessing, preventing and treating cardiovascular flower user useful in diagnosing, preventing and treating cardiovascular disorders, such as attentionally activated and prevention, arcenial inflammation, vascular wall remodeling, coronary microembolism, tachycardia, bradycardia, pressure overload, aortic bending, coronary artery ligation, vascular heart disease, valvular disease, including but not limited to, valvular degeneration caused by artificial valves, atrial fibrillation, long-QT syndrome, congestive heart failure, sinus node dysfunction, angina, heart failure, sinus node dysfunction, angina, heart failure, coronary arterial fibrillation, atrial flutter, pericardial disease, including but not limited to, pericardial effusion and pericardial disease, including but not limited co. pericardial effusion and pericardial disease, including but not limited co. pericardial effusion and pericardial disease, including but not limited co. pericardial effusion and pericardial disease. cardiomyopathy, myocardial infarction, coronary artery disease, coronary artery spasm, ischaemic disease, arrhythmia, sudden cardiac death and cardiovascular developmental disorders. The methods may also be used for identifying compounds that modulate cardiovascular disorders. Sequences given in ADE31644-ADE31769 represent the genes and proteins that may be regulated by a compound of the invention.

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKKN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prepare mouse tissues.

This is a long-transcript enriched CDNA library (Ref.
Genome Res. 11: 1552-1558 (2001). [PMID: 11544199]). Total
RNAS were obtained from Brs. Dennis Taub, Dan Longo
(National Institute on Aging, USA), Jonathan Keller
(National Cancer Institute, USA). Double-stranded cDNAs
were synthesized with an Oligo (dT) primer [Invitrogan
1.1 ug of total RNA, treated with T4 DNA polymerase, and
purified by tenhanol-precipitation. The cDNAs were ligated
to Lone-linker LL-Sal4, purified by phenol/chloroform, the
cDNAs were amplified by long-tange high fidelity PCR using
EX Taq polymerase (Trakara) with a primer Sal4-8. The
products were purified by phenol/chloroform and cloned into Sal1/Not! site of pCNV-SPORT6 plasmid
vector. The DNAS were digested with Sal1 and Not! enzymes
and cloned into Sal1/Not! site of pCNV-SPORT6 plasmid
vector. The DNAS were sandard chemical method. The
average insert size about 2.2 kb. The library was
constructed by Yulan Piao."

TITLE OF INVENTION: Human 7-Transmembrane Receptor
NUMBER OF SOUTHORS: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: SmithKline Beecham Corporation
STRET: 709 Swedland Road
CITY: King of Prussia
STATE: Pennsylvania
COWNTRY: USA
ZIP: 19406-2799
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/742,011
FILING DATE:
FILING DATE:
FILING DATE:
FREFERNCE/DOCKET NUMBER: 34,344
REFERENCE/DOCKET NUMBER: 310-270-5219
TELEPACH FOR SOUTH STATES SOUTH STELEPHONE: 610-270-5090
INPORMATION FOR SERQ ID NO: 1:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

OFFRANTS: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/09/116,498

FILING DATE: 16-Jul-1998

CLASSIFICATION: CURKNOWN>

ATTORNEY/AGENT INFORMATION:

NAME: Jackson Esq., David A.

REGISTRATION NUMBER: 26,742

REFERENCE/DOCKET WINDER: 1049-1-009

TELEPHONE: 201-487-5800

TELEPHONE: 201-343-1684

INFORMATION FOR REQ ID NO: 5:

SEQUENCE CHARACTERISTICS:

LENGTH: 1029 base pairs

TTYPE: nucleic acid

STRANDEDNESS: double
